Assissment 1

Student Name: Sagar Chhetri

UID: 24BCS11059

Branch: CSE

Section/Group: 707-SAP-B

Semester: 3rd

Date of Performance: 23-01-26

Subject Name: DAA

Subject Code: 24CSH-206

1. Aim:

I) Game of Rotation:

Input

Format

First line contains N denoting the number of elements on the belt.

Second line contains N space separated integers.

Output

Format

Output the required $PMEAN$

Constraints

$1 \leq N \leq 10^6$
 $-10^9 \leq \text{each number} \leq 10^9$

For any rotation, $PMEAN$ will always lie within the range of 64-bit signed integer.

2. Requirements (Hardware/Software): HackerRank

3. Procedure/code:

```
C++
1 #include <iostream>
2 #include <vector>
3 #include <numeric>
4 #include <algorithm>
5
6 using namespace std;
7 #24bcs11059
8 int main() {
9     int n;
10    cin>>n;
11    int arr[n];
12    int total =0;
13
14    long long pmeanf =0;
15    for(int i=0;i<n;++i) {
16        cin >>arr[i];
17        total +=arr[i];
18        pmeanf+=(i+1)*arr[i];
19    }
20    long long pmeans=pmeanf;
21    for(int i=0;i<n;++i) {
22        pmeanf=pmeanf-total+n*arr[i];
23    }
24    if(pmeanf>pmeans){
25        pmeans=pmeanf;
26    }
27
28    cout <<pmeans;
29
30    return 0;
31 }
32
33
```

5. Learning Outcome:

- **Understand array rotation concepts**
Learn how circular left rotations work and how data shifts within an array structure.
- **Apply problem-solving techniques**
Analyze a problem statement, identify constraints, and derive an efficient solution strategy.
- **Implement array manipulation in C++**
Gain hands-on experience in handling arrays, indexing, and modular arithmetic.
- **Optimize logic for performance**
Learn to avoid unnecessary rotations by using mathematical observations for efficient computation.
- **Work with iterative and conditional structures**
Strengthen understanding of loops, condition checking, and control flow in C++.
- **Develop algorithmic thinking**
Improve ability to reason about sequences, rotations, and optimization problems.
- **Handle competitive programming style problems**
Gain experience with logic-based challenges similar to those in coding competitions.
- **Improve debugging and testing skills**
Learn to test edge cases such as large inputs and repeated values.
